Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

*Nucleotide sequence of the 300-304 chromosomal segment of Bacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -1- FUNCTION: Transfers the N-acyl diglyceride group on what will become the N-terminal cysteine of membrane lipoproteins.
-1- PATHMAY: Lipoproteins biosynthesis; first step.
-1- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-1- SIMILARITY: Belongs to the lgt family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fransferase; Transmembrane; Germination; Complete proteome

G1ycoraldehydd 3-phosphate dehydrogenase 1 (RC 1.2.1.12) (GAPDH1).
Trichcoderma koningii.
Eukaryota; Fungi; Ascomycota; Pezizomycotina; Sordariomycetes;
Hypocreomyceridae; Hypocreales; Hypocreaceae;
          -i- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate + NADH.
NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.
-i- PATHWAY: Second phase of glycolysis; first step.
-i- SUBGNIT: Homotetramer.
-i- SUBCELLULAR LOCATION: Cytoplasmic.
-i- MISCELLANBOORS: THERE ARB THREE GENES FOR G3PDH IN YEAST.
-i- MISCELLANBOORS: THERE ARB THREE GENES FOR G3PDH IN YEAST.
-i- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 331;

"Two glyceraldehyde-3-phosphate dehydrogenase isozymes from the
"Two glyceraldehyde-3-phosphate dehydrogenase isozymes from the
Koningic acid (heptelidic acid) producer Trichoderma koningii.";
Fur. J. Biochem. 193:195-202(1990).
-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate +
NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.
-!- BNZYME REGULATION: INHIBITED BY KONINGIC ACID THROUGH THE
INTERACTION OF CYSTEINE RESIDUES WITH KONINGIC ACID EVEN AT VERY
LOW CONCENTRATIONS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             va-OCI-1993 (Rel. 27, Last sequence update)
28-FBB-2003 (Rel. 41, Last annotation update)
FTS system, fructose-like-2 IIC component (Phosphotransferase enzyme FIM, C component).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -i- PATHWAY: Second phase of glycolysis; first step.
-i- SUBUNIT: Homotetramer.
-i- SUBCELLUAR LOCATION: Cytoplasmic.
-i- MISCELLANBOUS: THIS PROTEIN IS A KONINGIC ACID

COPACTOR: Pyridoxal phosphate (By similarity).

SIMILARITY: Belongs to class-V of pyridoxal-phosphate-dependent aminotransferases. Csd subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-JUN-2001 (TrEMBLrel. 17, Created)
01-JUN-2001 (TrEMBLrel. 17, Last sequence update)
01-OTT-2003 (TrEMBLrel. 25, Last annotation update)
Conserved hypothecial protein (Hypothetical protein SAV1417).
SAV1417 OR SA1250.
Staphylococcus aureus (strain Muso / ATCC 700699), and
Staphylococcus aureus (strain N315).
Bacteria; Firmicutes; Bacillales; Staphylococcus.

The present sequence is the murine confluency regulated adhesion molecule 1 (CRAM-1, also known as JAM-2). CRAM-1 is one of the vascular adhesion proteins of the immunoglobulin superfemily (Ig Sf). The CRAM-1 protein and coding sequence can be used in the treatment of cancer, inflammation, to modulate cell.cell interactions and anglogenesis, and in the modulation of wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated human Confluency Regulated Adhesion Molecule 1 or 2 (CRAM-1 or CRAM-2) polypeptide, useful for treatment of tumors, inflammation reactions and modulating vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunoglobulin superfamily; Ig Sf; vascular adhesion molecule; inflammation; cancer; wound; angiogenesis; mouse; confluency regulated adhesion molecule 1; CRAM-1; JAM-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 1633; DB 3; Length 310;

CRAM-1 is one of the vascular adhesion proteins of the immunoglobulin superfamily (Ig Sf). The CRAM-1 protein and coding sequence can be used in the treatment of cancer, inflammation, to modulate cell-cell interactions and anglogenesis, and in the modulation of wound healing

RESULT
                             This is PROISED, a putative homologue of A33 antigen, a known colorectal cancer-associated marker. The invention concerns novel secreted and transmembrane proteins, designated PRO polypeptides. The CDNA and gene sequences are useful in the recombinant production of PRO polypeptides, as a hybridization probe to screen libraries to isolate cDNAs with sequence identity to PRO polypeptides or to map the gene encoding the PRO polypeptides and analyzing genetic disorders. The CDNA-gene can also be used to produce transgenic animals useful for the development and screening of therapeutically useful reagents. They can also be used in gene therapy, e.g. to replace a defective gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

Human confluency regulated adhesion molecule 1 #2

(first entry)

23-FEB-2001

```
The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic scierosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thromboortopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases inflammatory bowel diseases, allergic diseases, immune-mediated skin diseases, allergic diseases, immunological diseases of the lung, and transplantation associated diseases including cariments and hybridisation probes used in the isolation of the numan PRO sequences.                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the human confluency regulated adhesion molecule 1 (CRAM-1, also known as JAM-2). CRAM-1 is one of the vascular adhesion proteins of the immunoglobulin superfamily (Ig Sf). The CRAM-1 protein and coding sequence can be used in the treatment of cancer, inflammation, to modulate cell-cell interactions and anglogenesis, and in the modulation of wound healing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length

clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Frimers for synthesising the full length cDNA molecules have for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from RPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

ANU12172-AAU12446 represent novel human secretory and transmembrane FRO polypeptides. The FRO polypeptides are useful to detect other FRO polypeptides. To link bioactive molecules to cells expressing FRO polypeptides, to link bioactive molecules to cells expressing FRO polypeptides, to modulate biological activities of cells expressing FRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing FRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TWP-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or agene expression in pericyte cells, the release of prolecoglycans from cartiage, the proliferation of inner ear utricular supporting cells or of T-proliferation of inner ear utricular supporting cells or of T-proliferation of inner ear utricular supporting cells or of T-propreptides may modulate glucose or free faity acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor collypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy
Isolated , secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumors e.g. lung,

The inversion transce to an instance puryperce marking or transcendent amino acid sequence identity to secreted and transmembrane polypeptides PRO1800, PRO539, PRO982, PRO1844, PRO1863, Also included are vectors, host cells and antibodies against PRO polypeptides. PRO1868 useful for the diagnosis and treatment of inflammatory and immune related diseases including systemic lupus erythematosis, rheumatoid arthritis, systemic contructions hepatitis, psoriasis, allergic diseases of the lung and graft-cerosis, autoimmune hemolytic anaemia, thyroiditis, diabetes mellitus, infectious hepatitis, psoriasis, allergic diseases of the lung and graft-cerosis, autoimmune hemolytic anaemia, thyroiditis, diabetes mellitus, infectious hepatitis, psoriasis, allergic diseases of the lung and graft-constructing hybridisation probes for mapping the gene that encodes that the genetic analysis of individuals with genetic disorders, and for generating transgenic animals which are useful in the development can servening of therapeutically useful reagents. PRO nucleic acids are electrophoresis purposes. The anti-PRO antibodies are useful in case are electrophoresis purposes. The anti-PRO antibodies are useful in genetic calls, tissues or serum and for affinity purification of PRO. The present sequence represents a PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 SDPRIEWKKIQDGQTTYVYPDNKIQGDLAGRIDVFGKTSLRIWNVTRSDSAIYRCEVVAL 120

## WPI; 2002-090516/12. N-PSDB; ABL88202.

One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal.

# Claim 11; Pig 262; 565pp; English.

ABBBS003. The PRO proteins and polymucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polymucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angions, myccardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polymucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene exemplification of the present invention ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
